

Computer Programming Test (A)

Q1: write a program which asks the user to input the temperature in Celsius and gives its Fahrenheit equivalent. Note: Fahrenheit = $1.8 * \text{Celsius} + 32$.

Q2: write a program that print the area of rectangular?

Q3: write a C++ program that solve the following equation : $\sqrt{\frac{\sin x^2}{\cos y}}$

Q4: write a C++ program to print the following output:

```
      *
    * * *
  * * * * *
```

Computer Programming Test (B)

Q1: write a C++ program that print the area of square?

Q2: write a C++ program that solve the following equation : $\frac{\sin X}{C(a+b)}$

Q3: write a C++ program which asks the user to input the temperature in Celsius and gives its Fahrenheit equivalent. Note: $Fahrenheit = 1.8 * Celsius + 32$.

Q4: write a C++ program to print the following output:

*

* *

* * *

Computer Programming Test (C)

Q1: write a C++ program that compare between two numbers and prints only the smallest number?

Q2: write a C++ program that solve the following equation : $\frac{a(x*y)}{\cos x}$

Q3: write a C++ program which asks the user to input the temperature in Celsius and gives its Fahrenheit equivalent. Note: Fahrenheit = 1.8 * Celsius +32.

Q4: write a C++ program to print the following output:

*

* *

* * *
