

Q5

- a. Write a program that prints from (1-10) in descending order (ترتيب تنازلي) by using one dimension array .
- b. write the syntax of 2D Array.

Q2

**a. circle the Right Answer**

1 / Which of the following are logical operators in C++

a. #

☒ b. !,

c. @

2 / Which of the following is syntax of array?

☒ a. int name[ ];

b. int name( );

c. string name[ ];

3 / How do you declare an char variable called index with an initial A?

a. char.index == 'A';

☒ b. char index ='A';

c. int index='A';

**b. Write the Output Of the Code with correct the mistakes..**

```
#include <iostream>
```

```
int main()
```

```
int i, j, n;
```

```
cout << "Enter number of rows: " << endl;
```

```
cin >> n;
```

```
for(i = 1; i <= n; i++)
```

```
{
```

```
for(j = 1; j <= i; j++)
```

```
{
```

```
cout << i;
```

```
}
```

```
cout << "\n";
```

```
}
```

```
return 0;
```

```
}
```

**Output**

```
1
1 2
1 2 3
1 2 3 4
```

**c. How do you create a single-line comment? How do you create a multiline comment?**

Single line is //

multiline /\* ..... \*/

Q3:

**a. Write program that count the Greater between Two Numbers Using if Condition .**

b. fill the plank

- 1/ for( int i=0; condition; update ) statement;
- 2/ In C++, all arrays begin indexing at zero.
- 3/ return- result ( code ) { // body of function }
- 4/ How do you declare an int variable called index with an initial value of 9 index = 9

c. Write a program to solve this problem  $z=2x+5y$

Q4

a. What is the Main Difference between do-While and While Loops?

b. Write the output?

```
#include <iostream>
using namespace std;

int main() {
    int m = 50;
    cout << m++ << endl;
    cout << m-- << endl;
    cout << m << endl;
    cout << ++m << endl;

    return 0;
}
```

output

c. Match the Right Answer

|                                         |                                                                           |   |
|-----------------------------------------|---------------------------------------------------------------------------|---|
| 1/ A function is called by              | \n or endl                                                                | ② |
| 2/ How do you output a newline?         | its name.                                                                 | ① |
| 3 A C++ program begins execution with   | keyword specifies that the function does return a value.                  | ③ |
| 4/ What is a variable?                  | can be either true or false                                               | ⑤ |
| 5/ What values can a bool variable have | main() { \ \ }                                                            | ③ |
|                                         | any characteristics, number, or quantity that can be measured or counted. | ④ |
|                                         | true                                                                      |   |

|                                                                                   |                                                     |                          |           |
|-----------------------------------------------------------------------------------|-----------------------------------------------------|--------------------------|-----------|
|  | Department of Information Technology                |                          |           |
|                                                                                   | Even semester examination - Academic year 2021/2022 |                          |           |
|                                                                                   | Student Name                                        | Abdullah Homod Abdo      | Reg. No   |
|                                                                                   | Subject                                             | Computer Programming C++ | Date      |
|                                                                                   | Class                                               | BIIT/E                   | Time      |
|                                                                                   | Max. Marks                                          |                          | Signature |
| Lecturer                                                                          | Eng. Henda Saleh Ali                                |                          |           |

Q1: The first question is Compulsory and answer three other questions

a. True or False

1/ In C++, all arrays begin indexing at zero time ✓.

2/ In C++, statements are terminated by comma ✓.

3/ double is the keyword for the double floating-point data type. ✓.

b. Write Program that Sum Two Numbers by using Function.

```

#include <iostream>
using namespace std;
int sum(int x, int y)
{
    return (x + y);
}
int main()
{
    int x, y;
    cout << "The number ";
    cin >> x >> y;
    cout << sum(x, y);
    return 0;
}

```

input  
5, 2

output  
7

في الورد

c. What is a function?

included by using its main  
and you can call it by its name.
